PROBLEM

PROBLEM STATEMENT

Nowadays, the key hands of the transportation world 'drivers' faces several issues through current practices regarding consignments, location-based services, and many more technicalities.
Client wants to manage those pain points and provide an efficient solution by developing this Driver App.

STEP 1

DISCOVER

Based on the research to build this app, we came up with some additional features as well as with the main functionalities that needs to be shown. Accordingly, we designed the high-fidelity wireframes.

STEP 2

DEFINE

To build this app, our team went through various case studies and existing competitive applications. Our research data helped us discover the most pressing pain points of the users, such as lack of clarity in information, and also displaying result after the event.

STEP 3

WIREFRAMES

Based on the research to build this app, we came up with some additional features as well as with the main functionalities that needs to be shown. Accordingly, we designed the high-fidelity wireframes.

STEP 4

DESIGN

This app was the platform that displays a lot of text, especially numbers, needed to be easy on the eye. To increase readability, we used the font-family 'Roboto' as it has good line spacing and can be read even with the smaller sizes. We have measurely used 'Italic' font-style as it is correlated to speed of runner.
To get more insights and hence ease to understand, we gave an overview which shows 'Total finishers' according to age-group and gender. It also shows winners list according to age-group.
