

Recycle.think for nature

To design any app which indirectly will create environment awareness.

An app that will help government to understand how responsible & committed their constituencies are in terms of protecting their environment.

So I have tried to focus on recycling waste, so as to protect environment. It can be in any product form. So basically, my app is Product Recycle app.

This app will help people to identify which product are recyclable, which products cannot be recycled, and how can we recycle them.

Such initiative are ignored usually by the people because everyone thinks about the possibility carried out by others in the society.

The design includes **Intro screens, and high-fidelity designs which shows how flow is, what modules I have thought of.**

In this app below modules are their-

1) Sign In/Sign Up- Sign In & Sign Up page for Authentication.

2) Map- Whenever user wants to recycle any product, then they can click on map, search where is the nearest recycle bin, locate it and can throw their waste, which is waste management.

Also their is 'Scan' icon to scan a product package for detailed structure information and proper recycling location(screen providing details for the scanned item attached after 'Scan' screen).

3) Blog- To get the latest news, blog page is their in the app. This page can help to increase the number of users as the news section is their.

4) Store- To buy disposable, recyclable items. In this section you will be able to spend the coins won from the application(gamification).

5)Help- If the user is facing any issue regarding app flow, it's use of anything else related to app then they can send the query using this section where support team will connect with them in desired time period.

To make this app work, I have tried involving a module which seems different from the app category .i.e. 'Store' module. But this module I have tried introducing from the different perspective so as to increase number of users.

Here in 'Store' user can buy recyclable products using this app. They can check the details, and order the same.

Just other thought which I have not implemented in design is we can introduce 'GAMIFICATION' in the app so

Reusable Cup

Design Cups offer excellent quality and well thought-out details. The use of high-quality polypropylene (PP) and polycarbonate (PC) makes the plastic cups scratch-resistant and durable. Compared to glass, our Design Cup plastic cups are very light, but at the same time extremely dimensionally stable. CE mark included.
